

FLORIDA STATE UNIVERSITY
OFFICE OF THE VICE PRESIDENT FOR RESEARCH

A note to FSU Faculty interested in Health Related Research,

The first annual Collaborative Collision event aims to bring together health-focused faculty researchers across campus in an effort to foster discussions with the ultimate outcome being more frequent and robust health research conducted on Florida State University's campus.

Health related research takes place throughout our campus. So often though, faculty with like interests do not have the occasion to meet and discuss collaborative possibilities. With this event, faculty members from across campus will have the opportunity to meet one another, brainstorm, and discuss research ideas focusing on common interests.

Hosted by the Office of Proposal Development, this session will begin at 4:00 p.m. on Tuesday, **April 12** at the FSU Alumni Center and will conclude with a reception for participants, as well as invited individuals from State of Florida health agencies, and physician members of Tallahassee Memorial Healthcare and Capital Health Plan.

By participating in this event, FSU researchers will not only meet potential collaborators, but will also be included in the Collaborative Collision 2016: Health booklet that will be available to faculty as well as external agencies. This booklet will include information about all attendees including photos, research interests and contact information.

The deadline to register for this important event is Monday, March 28. I would encourage you to sign up today by visiting www.research.fsu.edu/collision2016. If you have any questions, please contact Beth Hodges, Director of the Office of Proposal Development.

Gary K. Ostrander
Vice President for Research
